

Functional Sourcing.

The flexible, efficient, and cost effective model developed and implemented at Premier Research allows sponsors to leverage our expertise within clinical research and the international depth of our resource pool.

Functional Models

- **Outsourcing:** Resource, based at a Premier Research office or regionally, is assigned to sponsor who provides work delegation, project management, and Clinical Data Management Systems (CDMS)
- **Insourcing:** Resource, based at sponsor location, is assigned to sponsor who provides work delegation, project management, and CDMS
- **Offshore Solution:** Experienced English-speaking professional based at a Premier Research office in Eastern Europe, provides data operations services, including data management, database programming, lab data loading, and clinical programming
- **Hybrid Solution:** A mix of multiple outsourcing models are utilized to execute a clinical research function
- **Consulting Projects:** Requests that are not met through core operating groups including database hosting, site data entry, project management consulting, data management report development, remote medical coding, database and CTMS administration, systems validation, and more

Expertise: The People

- Broad talent pool available
- Subject Matter Experts (SMEs), available in all functional areas, serve as project leaders
- Expertise using and administrating CDMS including Oracle Clinical, Oracle Clinical RDC, ClinTrial, Inform, and more

Benefits

- Strategic staffing and clinical management oversight through internal infrastructure support and expertise offers right balance for sponsors seeking a proven business model for the execution of clinical trial services
- Global reach and scalable resources guarantee timely completion of global trials allowing sponsors to focus on core product development
- Complete or partial outsourcing of key functional areas customized to the exact needs of the sponsor and implemented to ensure seamless integration with the sponsor's team
- Flexible solutions providing additional resources when, and for as long as, needed provides a cost efficient model to meet all critical timelines
- Efficiencies gained through the use of the same technologies and standard procedures
- Allows sponsors seeking to improve financial statements in advance of an acquisition or for sponsors in the midst of an acquisition integration
- Affords sponsors interested in maintaining a low overall head count while still requiring clinical research services

Case Study: Dedicated Resource Outsourcing

As a preferred provider for a large pharmaceutical company, we provide a wide range of data management services including discrepancy management, EDC support, database programming, and randomization services, using the sponsor's data management system and processes through a blended outsourcing strategy consisting of both onshore and offshore personnel.

Premier Research has exclusively dedicated more than 110 FTEs to support the sponsor's global studies. The teams are trained in the sponsor's SOPs and have Premier Research line management complemented by sponsor project management. For each functional role, a SME is assigned as the point of contact for the sponsor. This model provides the sponsor flexibility to reassign the resources as needed to ensure they are utilized effectively.
