DATA MANAGEMENT

Anticipating, adapting – and ready
for the unexpected

Wide-ranging services from clinical data experts

- + Case report form design, review, and annotation
- + Experience with multiple database platforms including DataLabs, Medidata Rave, Oracle, Clinical RDC, TrialMaster, and Inform
- + Database design, development, validation, and maintenance to meet your protocol needs
- + Query management for decision-ready data
- + Medical coding for adverse event experience clarity
- + SAE and external data source reconciliation for consistency of reporting
- + Standard and custom reporting to enable data visualization
- EDC, paper, and hybrid data collection designs to cover all scenarios
- Integration with IVRS, central labs, and other associated systems for efficiency and data consistency

DATA MANAGEMENT

Knowledge and expertise that drive decision-ready data

In the information maze that makes up every clinical trial, you never know where that next curveball will come from. The timeline shrinks, regulations change, or you encounter an unusual protocol design or database format. Our data managers are seasoned technical and pharmaceutical research pros, many with advanced degrees in math, science, or computer science. They have the knowledge to navigate every surprise and take on any issue that arises, providing high-quality data and guiding your drug through the development life cycle quickly and efficiently.

Whether it's case report form design, system development and validation, database design, medical coding, SAE handling, or data cleaning, we work to the highest standards in the industry to ensure successful and conclusive trial outcomes.

Our highly experienced technical data managers work in every therapeutic area and trial phase – and they excel at anticipating and handling the unexpected.

IT'S WHAT WE DO. BEST.™
