

FACT SHEET BY PREMIER RESEARCH

DERMATOLOGY

The need is compelling. We have the knowledge and experience to help customers at last realize the potential of life-changing new treatments.

Unprecedented advances are giving new hope to patients with conditions that have long eluded effective treatment. Having performed 60 dermatology trials in the past five years, we have the know-how, site relationships, and industry connections to make your next trial a success.

DERMATOLOGY

Expert study oversight

Our experience spans most major dermatological indications, and our project managers have the experience and discipline to provide expert scientific oversight and deliver high-quality studies on time and within budget. Because we know the best sites intimately, we can get trials started and enrolling fast.

Contact us if you're seeking not just a vendor, but a full-service provider that's really an extension of your team. A large biotech company studying a drug for chronic plaque psoriasis did, and we leveraged relationships with institutional review boards to get all 38 sites running within two months, and recruitment completed within four.

A specialty: Pediatric dermatology

Call us if your focus is pediatric dermatology. We served for six years as coordinating center for the Best Pharmaceuticals for Children Act and have done global dermatology studies in neonates, infants, children, and adolescents. In addition to understanding the regulatory requirements specific to working with vulnerable young patients, we really know children and recognize the challenges associated with patient enrollment and retention.

Expertise that's more than skin deep.

A customer gave us eight months to populate a Phase III study of a drug to treat papulopustular rosacea, and then moved up the deadline by two months to beat a competitor to registration. Our team was more than up to the task.

IT'S WHAT WE DO. BEST.™
